

Sustainable and resource-saving materials

Gregg  Marketing

**Manufactured
in resource-
saving manner**

Environmental protection is an important issue for each of us.
What can we do to reduce waste, save resources and strengthen the
environment in the long term? This topic is also very important to us.

**That's why we produce our labels from recycled material,
which can be recycled again after use.**

In addition to recycling material, we also offer you other, sustainable and
resource-saving materials. You can find more information about this here!

Sustainable or resource-saving materials

Recycled plastic

Our proven picture labels are made of plastic (PP and PS) with a very high proportion of recycling (about 80%). This material is colorfast, tear-resistant, weather- and UV-resistant. Also the waste from label production is 100% returned to the recycling cycle.

Areas of application for recycling plastics are:

- Hanging labels with rubber band
- Labels on sticks
- Stick-in labels
- Potcover
- Handles

Wood/Cardboard Labels

Natural raw materials for living goods – attractive product presentation on original type: We offer you individually designed cardboard labels on wooden carriers or directly on wood – optionally with certificate, from local controlled poplar wood cultivation.

Sustainable and resource-saving materials

Cardboard pot covers

Completely assembled and glued and therefore perfectly prepared for the assembly of the plants without further effort. They are supplied nested flat and it only requires one movement to raise it up and put the plant inside. The sustainable Cardboard is very wet-strength and meets the requirements of the green market.
